CPU

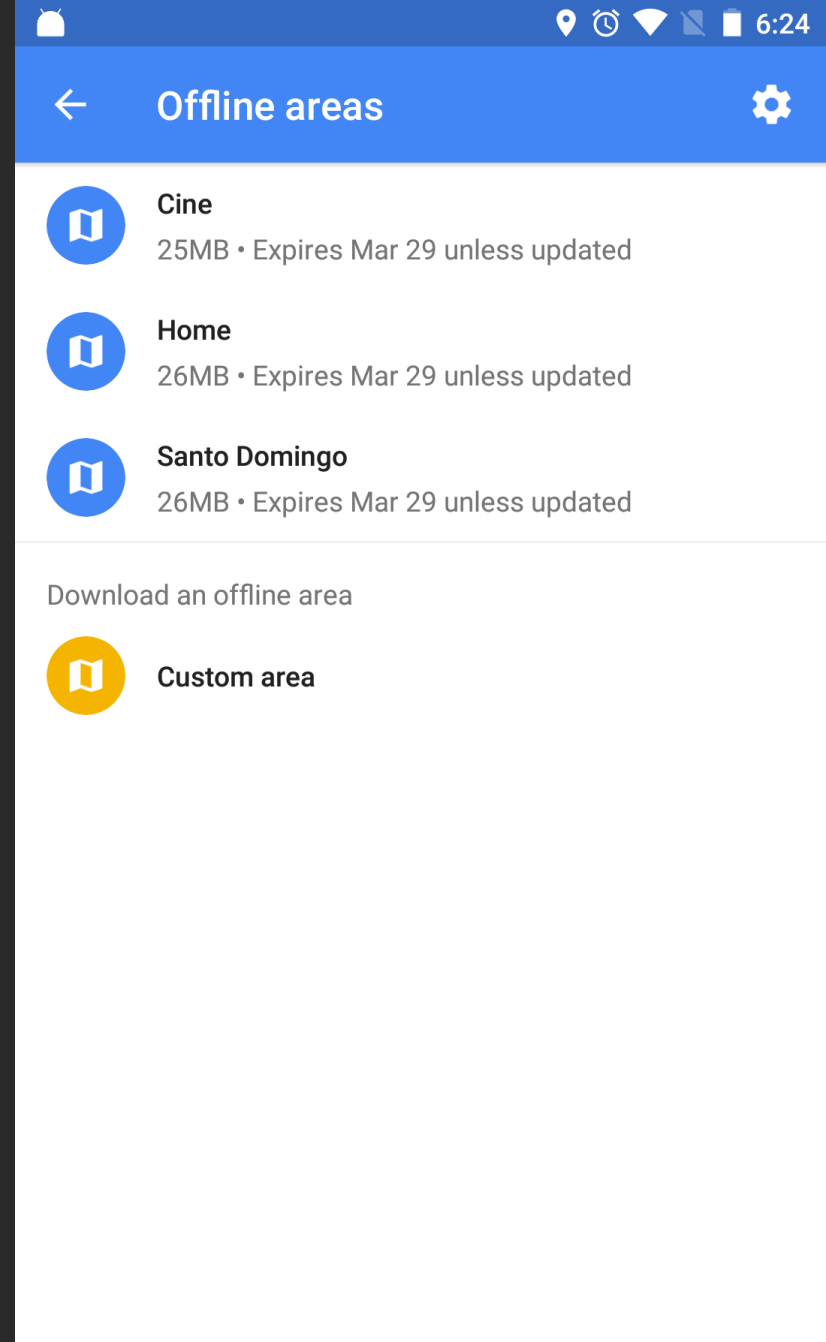

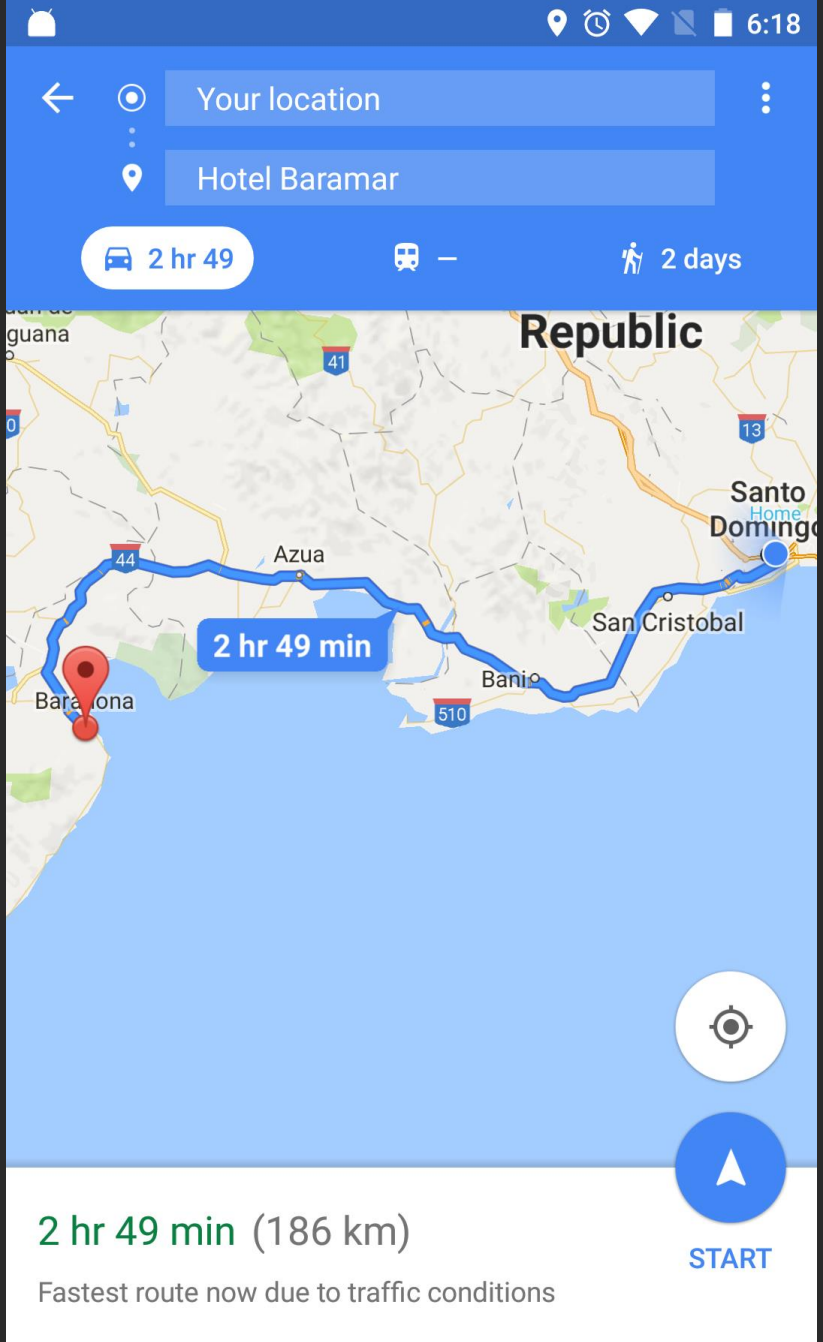

- **Heavy work in the server**
 - Easy to scale in the cloud
- **Not everybody has a Pixel or a Nexus phone**
 - Your users have devices slower than yours
- **The system will slow you down**
 - Avoiding overheating, Saving battery, animations

Network

- **Offline Friendly**
 - Commuting (metro lines), Pricy data plans
- **Custom Backend**
 - GraphQL, backend per platform(Android, iOS, Web)
- **Try to use WebP (-26%), Progressive JPEG**
 - Faster downloads, Fresco Facebook.

Tips And Tricks

- **Spend a day with a low-end phone**
- **Be careful with 3rd party libraries**
- **Advocate for Android Design (Is your responsibility)**
- **Why google not provide a solution?**
- **The backend must be designed for client not other way around**
